Your Name Here   **Active Learning #**

Description

Describe what this active learning module's intent is. If you are concentrating on configuring the OSPF routing protocol, then specify that here. This should be no more than four sentences and be written in your own words.

Topology

Create or recreate the topology within Microsoft Visio and paste it here. This document should be self-contained and not require opening another document unless there is a problem or I want to see something in particular for further discovery.

Configuration Syntax

Syntax	Description *(in your own words)*
Show ip route	Displays IPv4 routes listed within the routing table

Show command output

List any show commands used within this module here and their associated output from at least one of the devices used within your topology.

Troubleshooting Syntax

List any debug commands or other troubleshooting utilities you used to troubleshoot the technology used within this module

What Worked, What didn't?

If everything worked within the active learning module, state that here. If something didn't work, then state that here as well. Describe what steps you took to attempt to troubleshoot the issue and why you believe it occurred.

Configuration Files

Please make sure you include the visio (.vsdx) file, the output of "show running-config" files in .txt format as additional documents in your submission (one per device named with the hostname of the device and your lastname – ie: for hostname Router1 with your last name of "Smith", you would submit a file named Router1-smith.txt).
